

Climate	The conditions that describe temperature and rainfall conditions over a long period of time. Not the same as daily weather.
Loch	A Scottish word for lake.
Igneous rock	Igneous rocks are formed directly from melted rock, from or within volcanos.
Sedimentary rock	These are formed when broken pieces of rock are deposited in layers, usually in a lake or the sea and are then squashed together.
Metamorphic rock	Made up of igneous and sedimentary rocks that have been changed by heat or pressure.

Rock formation

The three main types of rocks are formed in and around volcanoes.

Fossils of extinct animals are found in some rocks.
